***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-6 are rejected under 35 U.S.C. 101 because the claimed invention recite “a signal space” which is considered as non-functional descriptive material, i.e., mere data. “A signal space” per se does not define any structural and functional interrelationships that permit any functionality to be realized. The allowance of such a claim would exalt form over substance.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Laurent.

Laurent discloses a method for multi-dimensional modulation of binary signals comprising the following claimed subject matters: “a symmetrical spherical quadrature amplitude modulation constellation in a multi-dimensional complex plane, the constellation bounded by a surface comprising all symbol points at a predetermined distance from a center point, coincident with an intersection of at least two axes, and corresponding in relative position to the symbol points on opposite sides of the axes” (Fig. 1, page 8, lines 1-5).

*Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Primich discloses a tetrahedon modem for phase modulating input serial binary data based on a four-dimensional vector set.
